Neutrik powerCON 20A cable connector rear bushing and latch change

Neutrik has revised its **NAC3FCA** and **NAC3FCB** powerCON cable connectors with a new two-component bushing (hard and soft component). With the new bushing, we have improved the kink protection and, simultaneously, due to the shape of the bushing, provided better protection against unintended opening of the connector.

The revised products also feature a yellow latch similar to that already used on powerCON TRUE1.

Form, fit, and function are otherwise unchanged.

These upgrades will help users recognize genuine, original Neutrik powerCON connectors quickly and easily.

Obsolescence of NAC3FCA-WR and the accessory BSL-WR

Having implemented the new bushing on **NAC3FCA** and **NAC3FCB**, **NAC3FCA-WR** and the accessory part **BSL-WR** will become redundant. Thus, these two items will be obsoleted after stock is depleted.

Ordering Information

Neutrik AG will start shipping the new design commencing with production code H19. Neutrik USA will begin shipping this new design after its stock of the prior design is depleted.

Existing orders of **NAC3FCA*** and **NAC3FCB*** on hand will be automatically switched to the new design.

Article numbers, pricing and MOQs will remain unchanged.
